Profile

Year 2 Software Engineering student at Ulster University seeking a 2027 industrial placement, with genuine industry experience building production automation tools at IFM COMAC, including a browser-automated ERP integration and a full-stack mobile stocktake platform, both now in company-wide use. Strong in Python, Java and web technologies, with additional experience in RAG and LLM-based applications. Used to working directly with warehouse and accounts staff to gather requirements and fix issues on live production feedback.

Education

Ulster University — BEng Software Engineering *2026 – Present*

Modules: Systems Security, Software Product & Process Management, Algorithms and Data Structures, Computer Networking, Software Testing, Server-Side Development.

Belfast Metropolitan College — Foundation Degree, Computing *2024 – 2026*

Modules: Object-Oriented Programming, Database Design, Web Development, Mobile Development, Introduction to AI, Cyber Security.

Methodist College — A Levels & GCSEs *2017 – 2024*

- A Levels: Mathematics, Business, Computer Science.
- GCSEs: Mathematics (A), Computer Science (A), English Language (C*) – 10 GCSEs graded A–C.

Work Experience

IFM COMAC — Software Developer *Feb 2026 – Present*

Work placement (Feb–June 2026), retained full-time over summer, now part-time alongside university.

- Delivered 4 production-deployed automation tools across accounting, sales and engineering, now in company-wide use within months of joining, saving significant manual processing time across departments.
- Automated a manual weekly accounting process end-to-end with an invoice PDF processor, deployed office-wide via SharePoint.
- Built a parts-catalogue data pipeline and a browser-automated ERP importer, replacing hours of manual data entry.
- Prototyped a customer/engineer chatbot for the company's new website to speed up parts lookup and ordering.
- Designed and deployed a live mobile stocktake app (Flask, Playwright, React Native) against the company's ERP, replacing paper-based warehouse counts.
- Maintained all code in Git/GitHub throughout, including feature-branch workflows across every production tool.
- Worked directly with the business owner and accounts team to confirm requirements and sign off fixes, and used Teams internally and Outlook with external ERP suppliers to report and resolve bugs.

Fireaway Pizza — Team Member *Sep 2025 – Nov 2025*

- Built customer service, time management and teamwork skills in a high-volume hospitality environment.

Key Projects

2SetsFitness API – Node.js / Express / PostgreSQL (Personal Project, In Development)

- Building a REST API backend for a personal fitness-tracking app: a PostgreSQL schema spanning workouts, nutrition, recovery and sports data, deployed on Railway.
- Integrated the Claude API for AI-driven features, including an AI coaching endpoint, meal-photo nutrition analysis, and sport-specific workout plan generation.

Doctor–Patient Management System — Java (Academic)

- Java OOP system with a menu-driven interface for managing patient records, including BMI calculation and vaccination tracking.

Chess AI — Python / Pygame (Academic)

- Chess game with a Pygame front end and a minimax-based AI opponent.

Document Q&A RAG Chatbot – Python / ChromaDB / Mistral-7B (Edureka AI Bootcamp)

- Built a retrieval-augmented generation pipeline that chunks a PDF, embeds it with Sentence-Transformers, and retrieves relevant passages from ChromaDB before answering with Mistral-7B, then compared grounded answers against ungrounded ones to measure the drop in hallucination.

Professional Skills

Communication

- Worked directly with warehouse and accounts staff at IFM COMAC to gather requirements and translate live production feedback into fixes.
- Presented technical progress and outcomes to company management throughout the placement.

Collaboration

- Collaborated with the sales and engineering teams at IFM COMAC to scope and deliver four automation tools now in company-wide use.
- Worked as part of a team in a high-volume hospitality environment at Fireaway Pizza, coordinating under pressure during peak service.

Problem Solving

- Investigated a stock-location data issue affecting around 20,000 units across IFM COMAC's warehouse, and pushed back on a proposed manual workaround in favour of a structural fix, working with the ERP supplier to resolve it properly.
- Reverse-engineered an ERP (Enterprise Resource Planning) system with no public API using browser automation to replace hours of manual data entry.

Technical Skills

Core: Python, Java, SQL, HTML, CSS, JavaScript/TypeScript, Flask, Node.js/Express, React Native, PostgreSQL, Git/GitHub, REST APIs

Additional: Playwright, SQLite, Tkinter, WSL/Linux, PowerShell, Cursor, Copilot Studio, Visual Studio 2022, VS Code, Expo, ChromaDB, Hugging Face Transformers, Mistral-7B, RAG / Embeddings, PDF processing, Microsoft Teams, Outlook

Languages Spoken: English, Urdu, Hindi, Tamil

Certifications & Training

- Cisco — Introduction to Cybersecurity (2025): attack concepts and data/privacy protection.
- Sensata Technologies — work experience (2025): team leadership, Python coding, electronics testing.
- KAINOS — Software Engineering programme (2023): Visual Studio (HTML/CSS), cyber security, presenting.
- Bright Network — Couch to Coder (2024): built and presented a website with HTML, CSS and JavaScript.

Volunteering

- Queen's University Belfast ISOC (Islamic Society) – Volunteer (September 2025): supported fundraising bun sales at university events.
- Ormeau Road Boxing Club – Volunteer (September 2024): collected donations at club events to help fund the club and its trips.
